

MARCHELLO SCIORTINO

From Idea to Free Product

How I create PDFs, images, checklists, worksheets, e-books, and downloads through creative amplification.

A simple behind-the-scenes workflow for turning one idea into a polished free resource, a carousel, a thumbnail, a downloadable PDF, and a lead-generating library asset.

1. Start With the Idea

Every free product starts with **clarity**. Before I generate anything, I decide what the product is about, who it helps, and what result it should create.

- **Define** the topic and outcome
- **Tell ChatGPT** the content, mood, and design direction
- If I want a recurring character, I **create** that character first

Clarity in.
Clarity out.

2. Generate Variations

I explore several versions of the design and message. The first result is only the beginning. Strong products come from testing, comparing, and refining.

- Review multiple image and layout options
- Tweak the copy, hierarchy, and visuals
- Keep refining until it looks and sounds like me

The magic is
in the tweaks.

3. Build the Carousel

Once the direction feels right,
I let the AI build the full carousel.
I keep the sequence clean,
visual, and easy to follow.

Turn the concept into
a full carousel

Use a 4:5 aspect ratio
for a strong social layout

Keep the copy readable
and the design consistent

4:5 is perfect
for social media.

4. Review Every Page

I go through the full carousel from beginning to end. This part takes patience, because the goal is not to settle for almost right.

- Check the wording and visual flow
- Remove weak or repetitive pages
- Choose the version that feels intentional

Do not settle
for almost.

5. Recreate the Thumbnail

After the carousel is finished, I save the first image and ask the AI to recreate it as a 16:9 thumbnail. That wide-format image becomes the product preview.

- Save the first carousel page
- Open a new chat
- Recreate it as a 16:9 thumbnail

Same message.
Wider format.

6. Add It to the Free Library

Next I go to my codebase and create a new free-product listing. The thumbnail becomes the card image, and the description quickly explains the value.

- ✓ Create a new free product listing
- ✓ Use the thumbnail as the card image
- ✓ Add a short description and clear call to action

The card is the invitation.

7. Export the PDF

I return to the chat where the carousel was created and ask it to produce a downloadable PDF. Now the content becomes a polished resource.

- Go back to the carousel chat
- Export the full sequence as a PDF
- Download the file for the library

One asset.
Two uses.

8. Connect the Download

Then I upload the PDF into my codebase and connect it to the product card. This makes the card useful, clickable, and ready to deliver value.

- Upload the PDF into the codebase
- Link the download button to the file
- Let visitors view the card and access the resource instantly

Make the path simple.

9. Capture the Lead

This is where the free product becomes a lead gold mine. I add an email-capture popup to the download card so visitors can unlock the free resource and join a warming audience.

- Use an email-capture popup
- Display it once per session
- Turn free value into long-term audience growth

Free value can build real momentum.

Create something useful. Share it beautifully. Let it keep working for you.
